

## **Release Notes for Version 5.6.0.130**

### FIXES AND CORRECTIONS

Fixed the refresh problem that resulted after resizing or moving a technician appointment on the service schedule board.

Billed and resolved tickets will now not allow appointments to be added to them.

Estimated group inspection times will only show on the appointments and labor screen if the ticket is in a group.

Fixed a problem with tabbing through the appointment dispatch form of a ticket that has been billed would allow a user to schedule a new appointment which caused the ticket to be re-opened.

Created Inspection tickets will now get their Customer Bill Id set when they are being created.

Fixed a problem where the ticket billing display was placing all charges into the 'Other' category even though there were charges for parts and labor.

### ENHANCEMENTS AND IMPROVEMENTS

Added colors to the header rows and alternating line colors [dark gray & light gray] to the grid area of the Inspection Creation form to match the layout of all other service grids.
